

Roman Blinds

A Roman blind represents a perfect window dressing for contemporary living, combining precise light control, insulating properties and the warmth and softness needed in a living room.

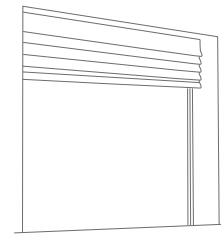

There are a number of specific advantages of an expertly made and hand sewn Roman blind.

Optimum fold size

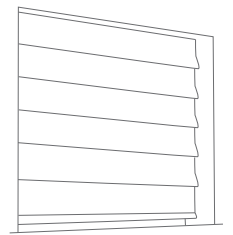

The optimum fold size is ensured, to match the size of the window and to maximise light into the room. This is a function of the fabric drop and the number of fabric folds required. Expert hand sewers use their extensive experience to calculate the optimum fold size.

Correct heading/control solution

The right heading solution is selected from a number of heading options available. These include batten and Velcro, and Silent Gliss header rail. All cord driven systems will be supplied with the necessary cord restraints to ensure child safety. For ultimate luxury, a motorised system is also available.

Superior finishing

Expert making ensures that you achieve a perfect effect on the fabric face when the blind is closed. Instead of sewing rod pockets into the face fabric, lining fabric is carefully sewn to the reverse face and the rod pockets and eyelets which are used to make the guides for the strings are attached to the lining fabric. This eliminates unsightly horizontal sewing lines and is a mark of a top quality product.

Blind weighting

A metal bottom weighted bar is selected based on the fabric type and weight. This is inserted into the bottom pocket, which is hand sewn closed for a professional finish.
